Warren A Kibbe, Ph.D., FACMI
Vice Chair & Professor of Biostatistics & Bioinformatics
Chief Data Officer, Duke Cancer Institute
Duke School of Medicine
Duke University

The February CHI² Innovations in Informatics Seminar Series event: Learning from Every Child: The Childhood Cancer Data Initiative will feature Dr. Warren Kibbe who will be talking about the initial design of the NCI’s Childhood Cancer Data Initiative (CCDI) and the initial learnings from the initiative. CCDI is building a community centered around childhood cancer care and research data. Through enhanced data sharing, we can improve our understanding of cancer biology to improve preventive measures, treatment, quality of life, and survivorship, as well as ensure that researchers learn from every child with cancer. Time for Q & A is included.
